The Examiner is respectfully requested to amend the above-identified application as follows:

IN THE CLAIMS:

Please amend Claims 29, 34, and 39, and add new Claim 46 to read as follows. A marked-up copy of the amended claims, showing the changes made thereto, is attached.

29. (Thrice Amended) A communication device comprising:

reception means for sending a transmit request to an e-mail server and receiving an e-mail transmitted from the e-mail server in response to the transmit request;

acquisition means for acquiring size information of an e-mail, stored in the e-mail server, from the e-mail server before sending the transmit request to the e-mail server;

a memory for storing e-mails received by said reception means;

judgment means for judging whether it is possible or not to receive at said communication device an e-mail stored in the e-mail server, according to the size information and a storable capacity of said memory; and

output means for visually outputting warning information indicating that an e-mail to said communication device, stored in the e-mail server, cannot be received, as a result of a judgment by said judgment means.

34. (Thrice Amended) A communication method, comprising the steps of:

sending a transmit request to an e-mail server and receiving an e-mail transmitted from an e-mail server in response to the transmit request;

acquiring size information of an e-mail, stored in the e-mail server, from the e-mail server before sending the transmit request to the e-mail server;

storing e-mails received in said receiving step, in a memory;

judging whether it is possible or not to receive an e-mail stored in the e-mail server, according to the size information and a storable capacity of the memory; and

visually outputting warning information indicating that an e-mail, stored in the e-mail server, cannot be received, as a result of a judgment made in said judging step.

39. (Thrice Amended) A computer-readable memory medium storing executable code for performing a communication method that comprises the steps of:

sending a transmit request to an e-mail server and receiving an e-mail transmitted from an e-mail server in response to the transmit request;

acquiring size information of an e-mail, stored in the e-mail server, from the e-mail server before sending the transmit request to the e-mail server;

storing e-mails received in said receiving step, in a memory;

judging whether it is possible or not to receive an e-mail stored in the e-mail server, according to the size information and a storable capacity of the memory; and

visually outputting warning information indicating that an e-mail, stored in the
